

Global Illumination

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Local vs. Global Illumination

Local

- Direct illumination of surfaces by light sources
- e.g. Phong and Cook/Torrence illumination

Global

- all light/surface interactions for entire environment
- Recursive ray tracing and radiosity compute this partially...

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Rendering Equation

$$I(x, x') = g(x, x') \left[\varepsilon(x, x') + \int_S \rho(x, x', x'') I(x', x'') dx'' \right]$$

- I***: illumination at first point from second
- g***: geometry term for visibility and distance
- ε** : emitted light from second point to first
- ρ** : reflectivity of light from x'' to x via x'
- Note that the equation is recursive

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Ray Tracing

Modifies reflectivity term

- Computes specular interreflections among surfaces
- Computes diffuse and specular reflections between light sources and surfaces

Typically integrates using point sampling of direction space

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Radiosity

Also modifies reflectivity term

- Computes diffuse interreflections among surfaces (light sources not distinguished)

Integrates by quantizing surface points and summing

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Light Transport Models

Specular

- Direction dependent
- High frequency

Diffuse

- Direction independent
- Lower frequency

From Watt and Watt, *Advanced Animation and Rendering Techniques*

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Light Transport in Ray Tracing and Radiosity

Ray Tracing

- Handles specular-to-specular and diffuse-to-specular

Radiosity

- Handles diffuse-to-diffuse

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Problematic light transport chain

From Watt and Watt,
Advanced Animation and Rendering Techniques

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Things easily missed: mirrors

Specular-to-diffuse

- Ray tracing unlikely to discover illumination reflected off mirror onto table

From Watt and Watt, *Advanced Animation and Rendering Techniques*

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Things easily missed: caustics

Reflection and refraction by curved surfaces causes intense focusing of light

From Watt and Watt, *Advanced Animation and Rendering Techniques*

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Backward ray tracing

Trace lots of rays from light sources to see where they go

- Store illumination maps with diffuse surfaces
- Easier to “follow the light” than to “find the light”
- Gets expensive! (in the general case)

Can be made efficient for special cases

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Path Tracing

Similar to distribution ray tracing

Applies Monte Carlo sampling to estimate integral

Traces a single path for each eye ray (only a single ray spawned at each surface intersection)

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Two-Pass Radiosity/Ray Tracing

First pass: radiosity

- Compute extended form factors and diffuse illumination

Second pass: ray tracing

- Perform standard ray tracing
- Diffuse component of illumination radiosity solution rather than just local illumination

Note: still doesn't handle light reflected specularly and later diffusely

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Two-Pass Examples

Plate III.27 Combining radiosity and ray tracing (Section 18.13.7). (a) Diffuse radiosity algorithm. (b) Diffuse first pass and ray-traced second pass. (c) Diffuse first pass with extended form factors and ray-traced second pass. (Courtesy of François Sillion, Liris, Ecole Normale Supérieure, Paris, France.)
