

Transformations for Virtual Worlds

(based on a talk by Greg Welch)

Johns Hopkins Department of Computer Science
Course 600.460: Virtual Worlds, Spring 2000, Professor: Jonathan Cohen

Coordinate System Transformations

What is a transformation?

- **The instantaneous relationship between a pair of coordinate systems.**
 - Defines the relative position, orientation and scale of two coordinate systems
- **Notation: T_{A_B} is the transformation *from* coordinate system B *to* coordinate system A**

Johns Hopkins Department of Computer Science
Course 600.460: Virtual Worlds, Spring 2000, Professor: Jonathan Cohen

Simple 2D Example

$$P_A = T_{A,B} \circ P_B$$
$$(4,5) = (3,2) \circ (1,3)$$

$T_{A,B}$ converts points in B to points in A
 $T_{A,B}$ measures the position of B's origin in A
The vector runs from A to B

Johns Hopkins Department of Computer Science
Course 600.460: Virtual Worlds, Spring 2000, Professor: Jonathan Cohen

Properties of Coordinate System Transformations

- Used to convert the coordinates of a point specified in one coordinate system to another.

$$P_A = T_{A,B} \cdot P_B$$

- Can be *inverted*

$$\text{Inverse of } T_{A,B} = T_{B,A}$$

Johns Hopkins Department of Computer Science
Course 600.460: Virtual Worlds, Spring 2000, Professor: Jonathan Cohen

Properties of Coordinate System Transformations

- Can be *composed* to compute the relationship between several coordinate systems

$$\mathbf{T}_{A_C} = \mathbf{T}_{A_B} \cdot \mathbf{T}_{B_C}$$

—Note: Nice property of subscript cancellation

Example:

$$\mathbf{T}_{\text{Shoulder_Hand}} = \mathbf{T}_{\text{Shoulder_Elbow}} \cdot \mathbf{T}_{\text{Elbow_Hand}}$$

Johns Hopkins Department of Computer Science
Course 600.460: Virtual Worlds, Spring 2000, Professor: Jonathan Cohen

Transformation Representations

- Can be represented by a **4x4 Transformation Matrix**
- Alternately can use the **VQS notation**
 - Represent transformation as a **Vector (translation)**, **Quaternion (rotation)**, and a **(uniform) Scaling factor**

Johns Hopkins Department of Computer Science
Course 600.460: Virtual Worlds, Spring 2000, Professor: Jonathan Cohen

Transformation Matrices

TRANSLATION

$$\begin{bmatrix} 1 & 0 & 0 & T_X \\ 0 & 1 & 0 & T_Y \\ 0 & 0 & 1 & T_Z \\ 0 & 0 & 0 & 1 \end{bmatrix}$$

SCALE

$$\begin{bmatrix} S_X & 0 & 0 & 0 \\ 0 & S_Y & 0 & 0 \\ 0 & 0 & S_Z & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix}$$

ROTATION

$$\begin{bmatrix} R_{11} & R_{12} & R_{13} & 0 \\ R_{21} & R_{22} & R_{23} & 0 \\ R_{31} & R_{32} & R_{33} & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix}$$

Johns Hopkins Department of Computer Science
Course 600.460: Virtual Worlds, Spring 2000, Professor: Jonathan Cohen

VQS Notation

TRANSLATION:

$$V = (T_X, T_Y, T_Z)$$

ROTATION:

$$Q = (Q_X, Q_Y, Q_Z, Q_W)$$

SCALE:

$$S = S_{\text{UNIFORM}}$$

Johns Hopkins Department of Computer Science
Course 600.460: Virtual Worlds, Spring 2000, Professor: Jonathan Cohen

Transformations: Why Quaternions?

- **Allow simple interpolation**
- **More compact**
- **Angle and axis of rotation easy to extract**
- **More efficient (composing and inverting)**
- **More tractable mathematically than matrices or Euler angles**

Johns Hopkins Department of Computer Science
Course 600.460: Virtual Worlds, Spring 2000, Professor: Jonathan Cohen

VQS Transform from P to P'

$$\mathbf{p}' = [\mathbf{v}, \mathbf{q}, s] \bullet \mathbf{p} = s (\mathbf{q} * \mathbf{p} * \mathbf{q}^{-1}) + \mathbf{v}$$

(where \mathbf{p} is treated as a quaternion with zero scalar component, and the result has a zero scalar component so can be treated as a vector.)

Johns Hopkins Department of Computer Science
Course 600.460: Virtual Worlds, Spring 2000, Professor: Jonathan Cohen

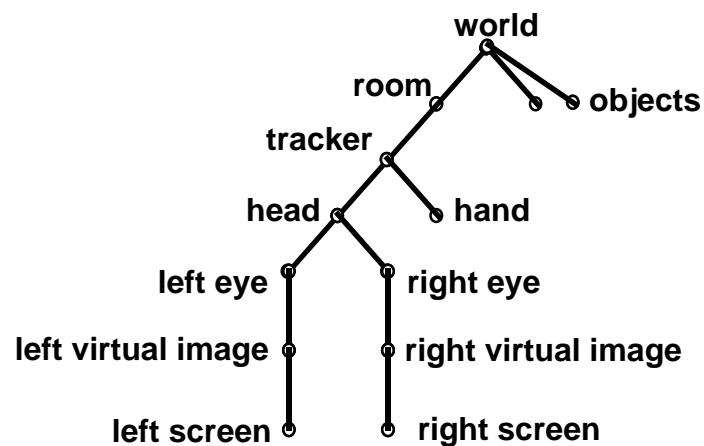

Coordinate System Graphs

- Graphical representation of the coordinate systems in a virtual world and their relationship
- Nodes represent coordinate systems
- Edges represent transformations

Johns Hopkins Department of Computer Science
Course 600.460: Virtual Worlds, Spring 2000, Professor: Jonathan Cohen

Coordinate System Graphs

Johns Hopkins Department of Computer Science
Course 600.460: Virtual Worlds, Spring 2000, Professor: Jonathan Cohen

Coordinate System Graphs: How do I use them?

Can be used to determine the transformations involved in converting between coordinate systems.

Example: Finding world coord of head space point

$$P_{\text{World}} = T_{\text{World_Head}} \cdot P_{\text{Head}}$$

$$T_{\text{World_Head}} = T_{\text{World_Room}} \cdot T_{\text{Room_Tracker}} \cdot T_{\text{Tracker_Head}}$$

$$P_{\text{World}} = T_{\text{World_Room}} \cdot T_{\text{Room_Tracker}} \cdot T_{\text{Tracker_Head}} \cdot P_{\text{Head}}$$

Johns Hopkins Department of Computer Science
Course 600.460: Virtual Worlds, Spring 2000, Professor: Jonathan Cohen

Coordinate System Graphs and Virtual World Interactions

- Can be used to determine the transformations involved in any virtual world interaction
 - Specifying Actions With Invariants
- Based on *frame-to-frame invariants*
 - A relation between a set of transformations in the current frame and a set from the previous frame

Johns Hopkins Department of Computer Science
Course 600.460: Virtual Worlds, Spring 2000, Professor: Jonathan Cohen

Specifying Virtual World Interactions

- **Coordinate system hierarchy and frame-to-frame invariants can be used to specify many forms of virtual world interaction:**

- Grabbing

- Flying

- Scaling

Johns Hopkins Department of Computer Science
Course 600.460: Virtual Worlds, Spring 2000, Professor: Jonathan Cohen

Specifying Actions With Invariants

Example: Grabbing a Virtual Object

- **Objective: Keep an object “fixed” to the user’s hand**
- **Frame-to-frame invariant:**

$$T^{n+1}_{\text{Object_Hand}} = T^n_{\text{Object_Hand}}$$

- **Result: Updated object position**

$$T^{n+1}_{\text{World_Object}}$$

Johns Hopkins Department of Computer Science
Course 600.460: Virtual Worlds, Spring 2000, Professor: Jonathan Cohen

Coordinate System Graph

Johns Hopkins Department of Computer Science
 Course 600.460: Virtual Worlds, Spring 2000, Professor: Jonathan Cohen

Specifying Actions With Invariants

- Use coordinate system graph to expand:

$$T_{\text{Object_Hand}} = T_{\text{Object_World}} \cdot T_{\text{World_Room}} \cdot T_{\text{Room_Tracker}} \cdot T_{\text{Tracker_Hand}}$$

- Substitute:

$$T^2_{\text{Object_World}} \cdot T^2_{\text{World_Room}} \cdot T^2_{\text{Room_Tracker}} \cdot T^2_{\text{Tracker_Hand}} = T^1_{\text{Object_World}} \cdot T^1_{\text{World_Room}} \cdot T^1_{\text{Room_Tracker}} \cdot T^1_{\text{Tracker_Hand}}$$

Johns Hopkins Department of Computer Science
 Course 600.460: Virtual Worlds, Spring 2000, Professor: Jonathan Cohen

Specifying Actions With Invariants

- Solve:

$$\mathbf{T}^2_{\text{Object_World}} = \mathbf{T}^1_{\text{Object_World}} \cdot \mathbf{T}^1_{\text{World_Room}} \cdot \mathbf{T}^1_{\text{Room_Tracker}} \cdot \mathbf{T}^1_{\text{Tracker_Hand}} \cdot \mathbf{T}^2_{\text{Hand_Tracker}} \cdot \mathbf{T}^2_{\text{Tracker_Room}} \cdot \mathbf{T}^2_{\text{Room_World}}$$

- Invert $\mathbf{T}^2_{\text{Object_World}}$ to obtain $\mathbf{T}^2_{\text{World_Object}}$

Johns Hopkins Department of Computer Science
Course 600.460: Virtual Worlds, Spring 2000, Professor: Jonathan Cohen

Other Common Operations

Flying

- Modify $\mathbf{T}_{\text{world_room}}$

Scale world/user

- Also modify $\mathbf{T}_{\text{world_room}}$
- Often scale about hand or head

Scale object

- Scale about hand or about centroid

Johns Hopkins Department of Computer Science
Course 600.460: Virtual Worlds, Spring 2000, Professor: Jonathan Cohen

Where do I learn more?

- **Computer graphics texts (e.g. Foley, vanDam, Feiner, and Hughes)**
 - probably on reserve at MSE for Kumar's Computer Graphics class
 - **1994 Paper by Robinett and Holloway**
 - READ IT!
 - **Paper on quaternions by Shoemake and Chou**
 - **Quaternion/transformation support provided by quatlib**
-

Johns Hopkins Department of Computer Science
Course 600.460: Virtual Worlds, Spring 2000, Professor: Jonathan Cohen
