Random Acts of Kindness

This app enables its users to send random or selected photo or text messages to a random or selected recipient. The app is a single activity. The top is in charge of sending a text message, and the bottom is in charge of choosing a photo. When one is selected, the other grays out. For both the Text and contacts, when a random message or contact is chosen, the chosen option will display in the appropriate TextView. Hitting the choose photo opens the photo library and allows for the selection of a single photo. Selecting the TextView to the right of the sending to: text opens contacts and enables the user to select a contact. When the user is totally finished, they hit send, and the message will send to the chosen contact.

Here is what the app will look like:
