

Accelerating Ray Tracing

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Bounding Volumes

Simple volume description guaranteed to contain a more complex volume description

Test ray against more complex primitive only if it intersects bounding volume

Increases time for hits, but reduces time when ray misses bounding volume

Provide bounds on interval of intersection

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Bounding Volume Examples

Sphere

Axis-Aligned Bounding Box

Oriented Bounding Box

General Slab Intersection

Bounding Volume Hierarchies

Cluster bounding volumes hierarchically

Only intersect ray with child volume if it intersects parent

Reduces number of ray-volume and ray-object intersection tests

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Bounding Volume Hierarchy Example

Bounding Volume Tree

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Computing Hierarchies

Top-down

Bottom-up

Minimize volume/surface area

Computing “good” hierarchies is difficult

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Space Partitioning

Break model space into chunks

Pre-compute which objects overlap each chunk

Trace rays through chunks

Only intersect rays with objects stored in current chunk

Typically only allow each ray-object intersection once (not in multiple chunks)

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Types of Space Partitions

Uniform

Octree

K-d tree

BSP Tree

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Tracing through a Space Partition

Incrementally

- trace along ray, walk from partition to partition
- difficult except for uniform partition
- other partitions may require augmented data structures

Top-down

- intersect ray with each of node’s children
- traverse children it intersects

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Frustum Culling

Cull all bounding volume nodes that lies outside current viewing frustum

Probably not necessary if using space partition

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Frameless Rendering

Double buffering - wait for all pixels to display image

- Slowly displays old images

Frameless rendering - display all pixels immediately

- Quickly displays partially-updated images

Applicable to interactive applications requiring low latency and high performance

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Frameless Rendering Example

All pixels updated at 5 Hz

33% pixels updated at 15 Hz

From Bishop et al., "Frameless Rendering: Double Buffering Considered Harmful," *Proceedings of SIGGRAPH 94*, page 176.

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

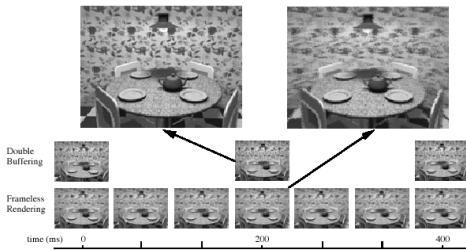

Figure 1. The bottom row shows 7 frames of a 15 Hz frameless rendering sequence with 33% of the pixels updated in each frame. The middle row shows 3 frames of a double-buffering sequence updated at 5 Hz.

From Bishop et al., "Frameless Rendering: Double Buffering Considered Harmful," *Proceedings of SIGGRAPH 94*, page 176.

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Interactive Ray Tracing

Experiments run on high-end parallel machine

- Scales to hundreds of processors on SGI Origin 2000
- Scalability limited only by load balancing and synchronization

Can employ frameless rendering

Johns Hopkins Department of Computer Science
Course 600.456: Rendering Techniques, Professor: Jonathan Cohen

Interactive Ray Tracing Video

From Parker et al., "Interactive Ray Tracing," *Proceedings of the 1999 Symposium on Interactive 3D Graphics*.

Johns Hopkins Department of Computer Science
