

The following OT tableau was created in \LaTeX . Note that the column widths and row heights are chosen automatically.

If you change the star patterns or reorder the columns, you can pipe just the 6 candidate lines through the "shade" script to automatically revise the exclamation points, shading, and pointy hand.

(syll. troch.)	NONUNARY	SPREAD	SHORTFT
candidate 1	*!		
 candidate 2			*
candidate 3		*!	*
giant	*!		*
candidate 5		*!*	**
 candidate 6			*

Warning: This document should print correctly. But if you are viewing it with `xdvi`, then the shaded cells may appear as solid black. If you are viewing it with `ghostview` or Acrobat Reader (PDF), then the shading may appear to obscure some of the gridlines unless you zoom in a lot.

Warning: The pointy hand should appear correctly in PDF. However, in the other formats (.ps and .dvi) it may look wrong if you don't have the necessary font installed.
